

EMC²
where information lives[®]

Partner Fact Sheet

Sudlows and EMC have joined forces as Velocity Affiliate Partners to deliver some of the most technologically advanced storage hardware solutions developed to promote data recovery and improve cloud computing.

EMC Data Center systems and solutions can increase the operational agility of your entire Data Centre and networked infrastructure. The solutions portfolio will enable you to mitigate risk, improve service levels, and realize cost advantage by mapping technology needs to your business objectives.

Enterprises must leverage the data centre and network supporting their information infrastructure. Rising demand for availability of critical communications systems must also be balanced with budgetary considerations which is typically the starting point for Sudlows to design a new data centre and storage/ back up and archiving solution.

Sudlows is working with EMC, market leaders in delivering storage, back-up and archiving technologies, to offer you the most advanced solutions at the core of your business.

As a number one technology vendor, EMC provides an efficient information infrastructure that lets you store, protect, optimize and leverage data, allowing maximum efficiency and the potential for future growth.

This partnership gives our customers the opportunity to take advantage of the superior features of EMC at an affordable and cost efficient level.

Hardware

VNX

Get affordable, high performance unified storage with innovative storage software for simple and efficient solutions, optimized for virtual applications.

Isilon

Get powerful scale-out NAS solutions for big data that are simple to install, manage, and scale, at any size.

Atmos

Combining the power of a globally accessible storage platform with all the benefits of cloud based architecture. Atmos has the capacity and flexibility to run in a virtualised environment that can include either your own storage solutions or within EMC purpose-built, low cost, high-density hardware.

Avamar

This source based data de-duplication solution significantly reduces back-up windows by only storing unique daily changes that intelligently avoids backing up the same data twice, while always maintaining daily full backups for immediate single-step restore.

Data Domain

This target based de-duplication technology has changed the economics of storage to help create reliable, efficient and cost-effective data protection architecture. By integrating easily into existing storage infrastructures, companies of all sizes are using Data Domain de-duplication storage to reduce backup costs and simplify data recovery.

VPLEX

Deploy next-generation architecture to enable simultaneous information access within, between, and across data centers.
