

JUNIPER
NETWORKS

Partner Fact Sheet

Connect everything and empower everyone

Sudlows and Juniper Networks share a common vision for the future of the network.

As an approved Juniper Networks' Partner, Sudlows are dedicated to developing new ideas and creating the innovations that will serve the growing demands of the networked world.

To do this, we're leading the market by creating a new network built on simplicity, security, openness and scalability. Modern data centres require complex, powerful, secure networks that link

together a myriad of virtualised server and storage systems. So reducing the amount of equipment required is a major challenge!

By utilising Juniper's new Network QFabric technology and Junos OS to reduce the number of switching layers, and manage security systems within the data centre, Sudlows are able to protect and enhance every dimension

of the data centre experience in the most efficient way possible.

Meeting that challenge of the new data centre – Sudlows and Juniper Networks: 'Connect everything. Empower everyone.'

Sudlows has partnered with experts in networking, security and switching technologies, Juniper, to offer the latest advancements and solutions to our clients.

Juniper's vision is to 'Connect Everything. Empower everyone' and their emphasis on leading the way in innovations makes them the perfect partner for Sudlows.

This partnership gives us the opportunity to offer our customers the very best in cutting edge network advancements, switching and security, and ultimately lead the way in connectivity.

Switches

EX Series Ethernet Switches

The EX Series Ethernet Switches deliver high performance, carrier-class solutions built to meet the needs of today's converged branch-office, campus, and data centre networks.

QFX Series

High performance devices deliver Juniper's unique QFabric architecture, supporting thousands of ports within a single-tier data centre or cloud network with ultra-low latency, high resiliency, and the simplicity of a single switch.

Security

ISG Series Integrated Security Gateways

Purpose-built, high-performance integrated security gateways designed to deliver scalable network and application access security for large enterprise, carrier and data centre networks.

SSG Services

High performance security platforms designed for everything from small branch offices to large global deployments. Ideal for stopping internal and external attached, preventing unauthorised access and achieving regulatory compliance.

Routing

SRX Series Gateways

The Juniper range of SRX gateways consolidate network switching, routing, QoS, and advanced security options for a comprehensive gateway solution for any data centre environment.

J- Series

The J Series Services Routers offer a variety of flexible interfaces that deliver secure, reliable network routing solution to remote, branch, and regional offices.
